

Kodak GOLD

PRESERVATION DISC

Kodak Gold Preservation Disc

Data Armour Plus Protective Layer

The Scratch Resistance on Data Armour Plus exceeds 250 g of pressure. The highly durable Data Armour Plus protection system offers more protection from handling than most other discs.

Protective Printing Layer

Kodak's printed label includes a clear coat protection layer to give the Kodak Gold Preservation Disc three layers of added protection.

Data Armour Protective Layer

Extra tough scratch-resistant coating prevents damage and lost data! Information which is stored in the dye layer is protected! Superior protection from handling ensures that Kodak protects your memories longer.

Gold Reflective Layer

Gold promotes a longer disc life. Gold does not oxidize or breakdown, therefore data is preserved longer. The Kodak Gold Preservation Disc only uses 100%, 24 karat Gold for its reflective layer.

Phthalocyanine Dye

Mitsui Phthalocyanine dye is a patented archival dye, designed with the Photo Industry in mind. Using Mitsui Phthalocyanine, a Gold Reflective Layer and grooves engineered to specification, data retention is up to 300 years making the Kodak Gold Preservation Disc one of the best quality available.

Optical Grade Polycarbonate

Using Optical Grade Polycarbonate, each disc is molded and quality tested to precisely engineered specifications. By closely adhering to these specification BLER, jitter and other factors that reduce disc longevity are minimized, promoting maximum archival life in each Kodak CD-R.
